Beginners guide to earning BTCT online

For PC, to follow step by step:

1. Download and install BTCT wallet at www.bitcointoken.pw.
    Make sure you download the right version for your operating system.
    Secure your wallet by setting a password under 'Settings > Encrypt
    wallet' (Not necessary but recommended).

2. Start a trading account at one of the following markets (I have put them in
   order of trading volume):

    - https://crex24.com/

    - https://www.altilly.com/

    (I have put my own referral link under Altilly.com here, so you can help
    me out by starting a trading account at Altilly if you wish to thank me for
   the guide :-)
    I will also use Altilly as a further example for the other steps.

    - https://altmarkets.io/

3. Send BTC to the deposit address of your trading account. Make sure this is the <u>BTC</u> deposit address of your account.
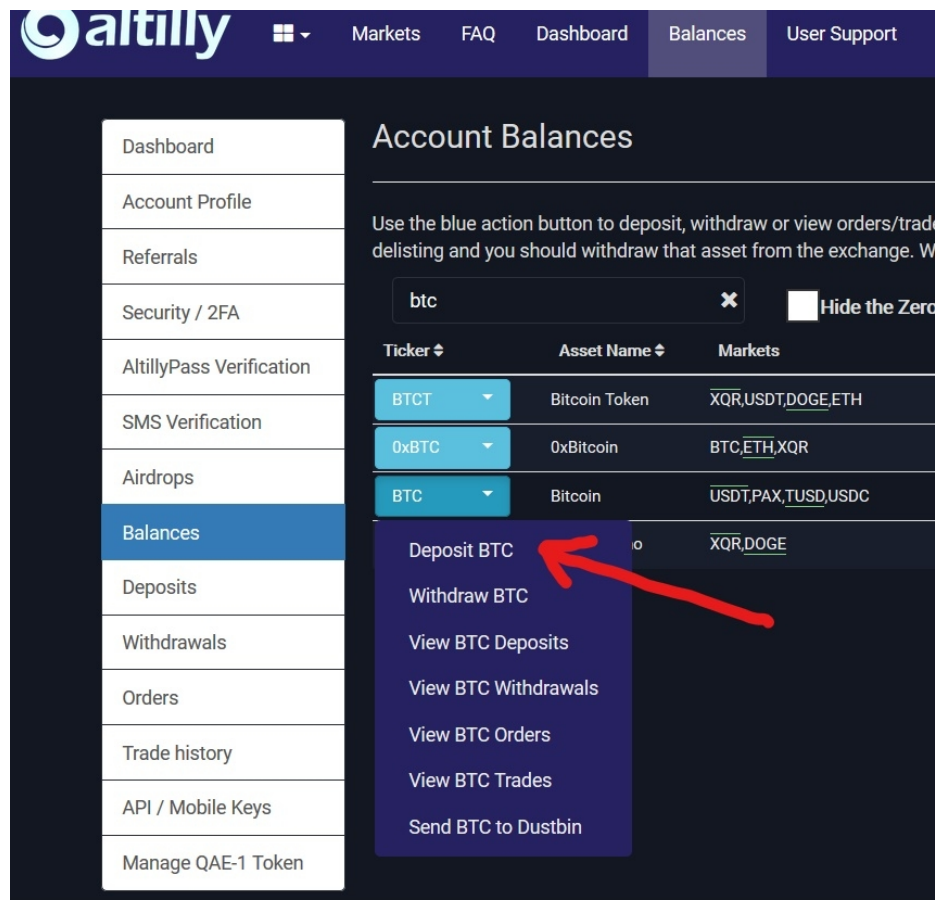

In case of using Altilly, search for the trading pair you would like to use. I personally prefer USDT to trade with because it's steady. So then, trade BTC for the amount of USDT you would like to buy BTCT with.
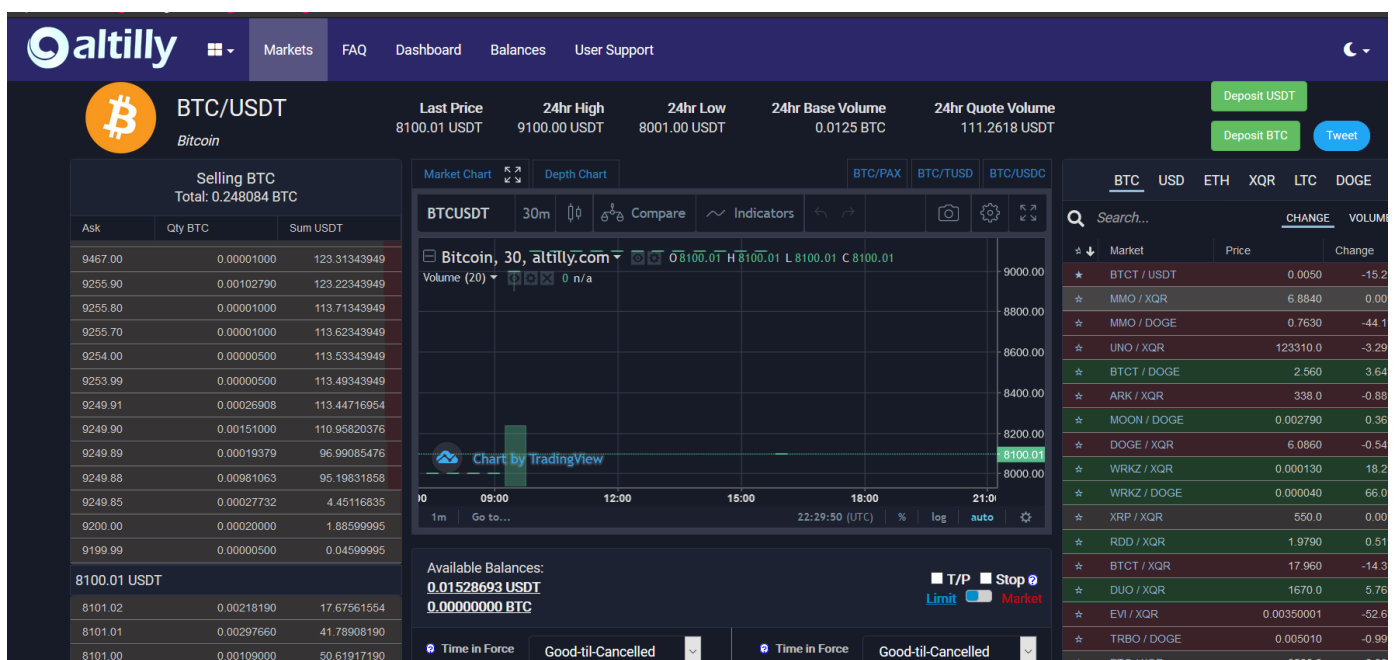

4. When the order is filled, it's time for the next step: buy BTCT!
    Go to the USDT/BTCT trading pair (or which ever coin you bought with
    your BTC to trade with – then, make an offer to buy BTCT.
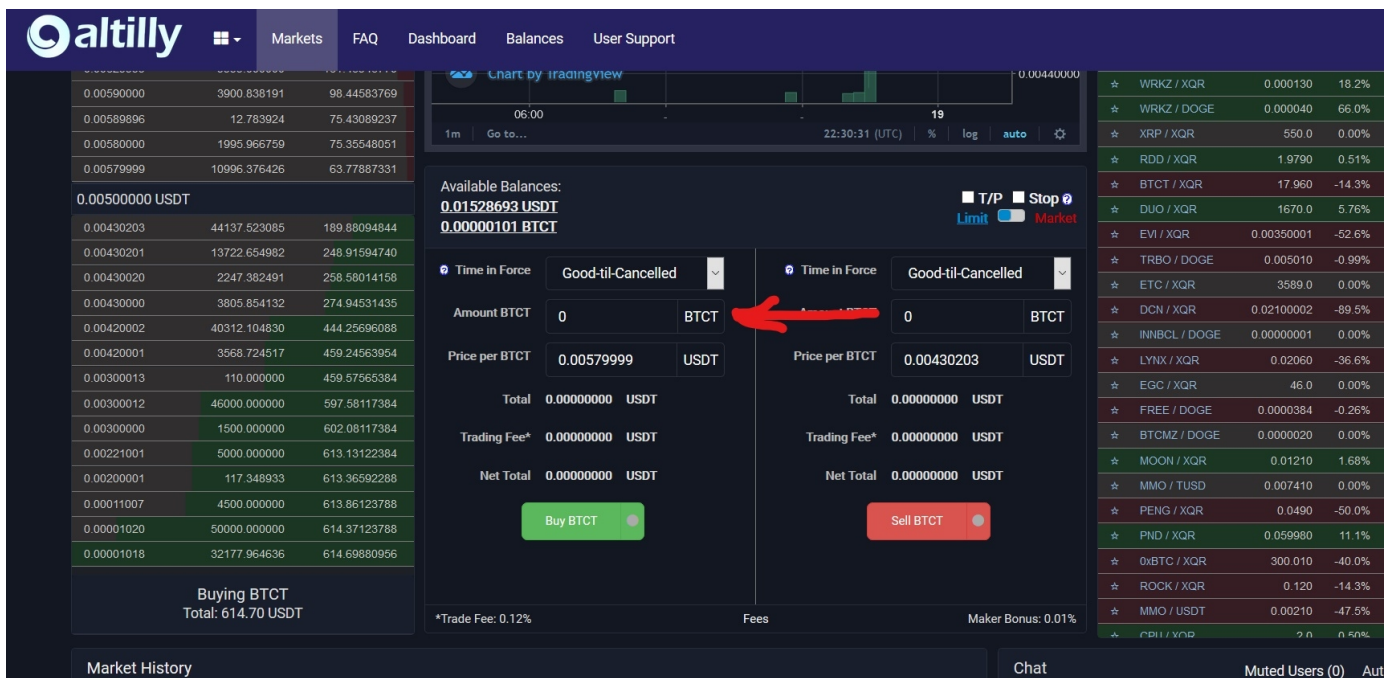

5. So now, you are the proud owner of your first amount of BTCT.
    Next step is to make more of it – **for free!**
    Keep the tab of your market open, go to one of the following sites in a
    new tab and make an account there:

    - https://crypos.io/

    - https://ihostmn.com/

    - https://masternode.community/

    I will use *Crypos.io* in my example because I find this the most clear one.

6.   Next, open your BTCT wallet on your PC. On the left side, click 'Receive' and then 'Receiving addresses'. Choose one, change the label to Crypos and then copy the address of that label.

Then, go to the tab where you have Crypos.io still open. Open your profile and click on 'My wallets'. Click the little '+' to add a wallet. Choose BTCT, it will ask you for an address. Paste the address you just copied from your BTCT wallet. This will be the address your rewards (or free money as I like to call it) will be sent to.

7. Next, click 'Shared masternode', scroll down, look for Bitcointoken (BTCT) and click 'Buy share'. This will prompt a BTCT address, copy it.
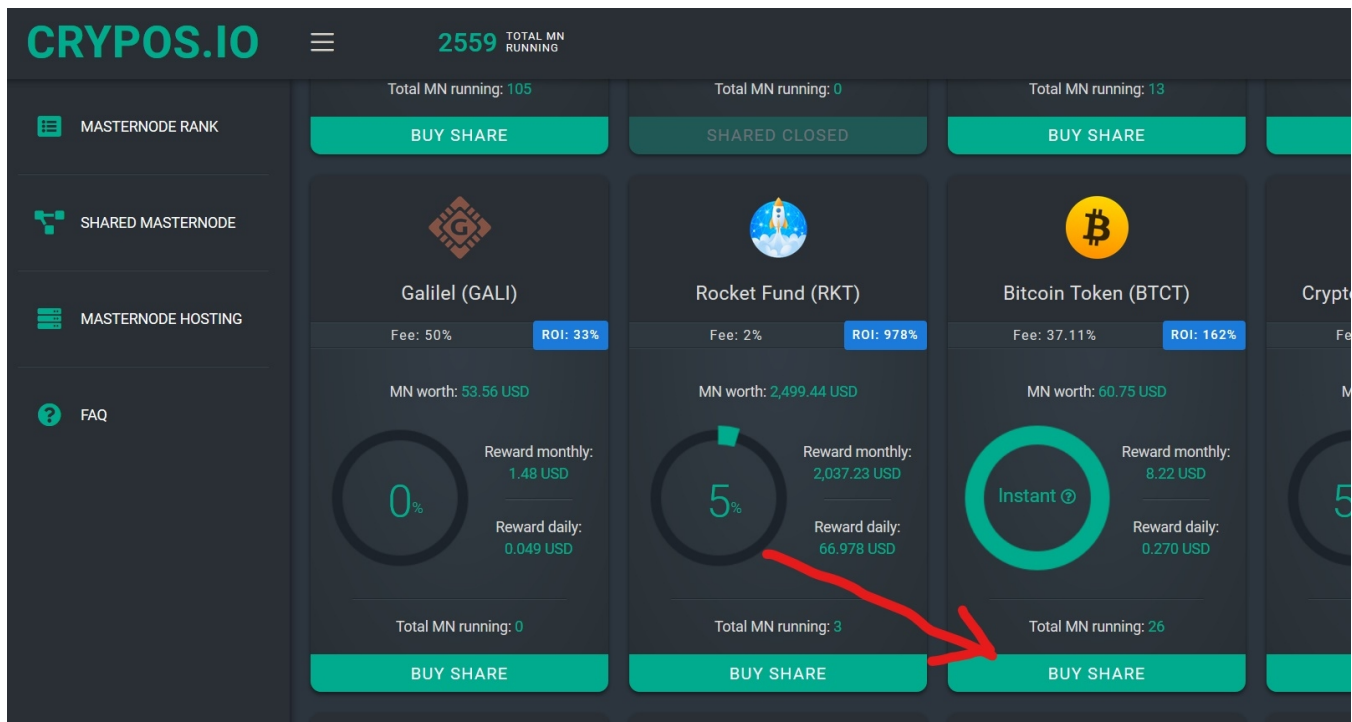

Switch back to the tab of the market you bought your BTCT on, go to your balance tab, click on BTCT and choose 'Withdraw'.
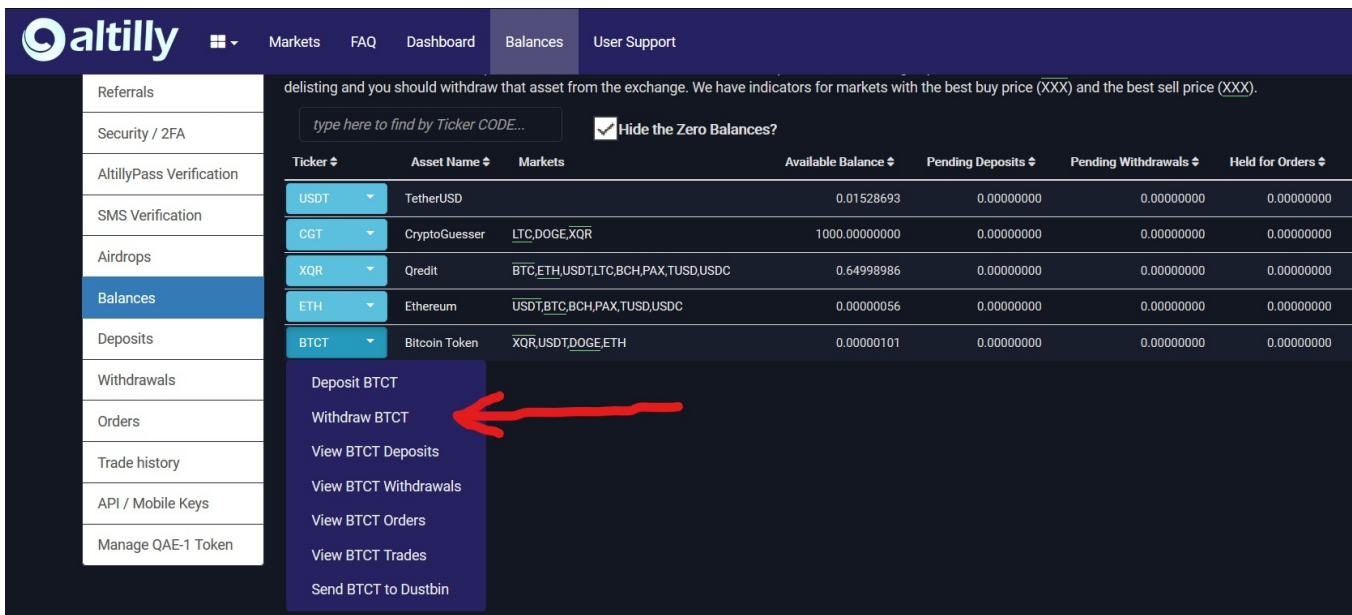

Under 'Receive address', put the deposit address you just copied. Make sure it's an amount between a 100 and 9999 BTC, not more. Confirm your withdrawal. It will send your BTCT to the shared masternode and start working automatically.

PRESTO!!

You are now an earning member of the BTCT community! In about 3 to 4 hours you will start seeing the rewards coming into your wallet, welcome to the community and enjoy the profit!

Tips & Tricks, for pleasure and safety:

* Always use 2FA (Google authenticator) on your accounts, for safety.

* Always doublecheck the address when sending any BTCT/Cryptocurrency. If you send it to a wrong address, your funds are lost.

* Play around with the settings. For example, on Crypos, you can choose to reinvest your profit right away. There's a slider from 0% to 100%. If you choose to reinvest, it will send your rewards into new shared masternodes. Playing is learning!

* Don't invest any amount of money you can not miss. Consider it lost already, that will avoid any dissapointment and bitterness. Keep it happy and trade safe!
